

# First step for the "Construction 2050 Alliance"

On the initiative of FIEC, together with CECE (Committee of European Construction Equipment), CPE (Construction Products Europe) and EBC (European Builders Confederation), 40 representatives of the main EU organisations supporting companies involved in the construction process met in Brussels, in order to set the basis for the "Construction 2050 Alliance".

The main objectives of this Alliance are to contribute to building the sustainable Europe of tomorrow and to raise the awareness of the EU institutions, of the political importance of the construction sector.
